

ROQ STACK

STACKING ACCESSORIES

The ROQ Stack is a module that enhances the ROQ packing line. Its function is to stack folded garments. This opens the range of services, the way it works is simple. The ROQ Stack is attached to the end of the ROQ Fold and it is controlled from its central panel. This is where the user defines the number of pieces per stack. After a stack is complete there are 2 options, either it goes into a conveyer belt and starts a new stack, or it goes into a packing solution and the ROQ Stack starts a new stack. If it goes into the conveyer belt then the stacks need to be accommodated into the shipping boxes; in the other solution, the packing solution will finish the task.

POSSIBLE TO
COMBINE
WITH:

ROQ Stack

length (mm / inch)	800 / 31.5"
height (mm / inch)	750 / 29.5"
width (mm / inch)	650 / 25.6"
Dimension of piece for stacking (mm / inch)	450x450 / 17.7" x 17.7"
maximum height of stack (mm / inch)	450 / 17.7"
maximum production (pieces/h)	700*

*Same as ROQ Fold
- power supply: 230V+N, 2x230V, 3x230V, 3x400V+N - 50Hz or 60Hz

HOW CAN ROQ Stack HELP YOUR BUSINESS?

hands free
it stacks all by it self

choice
stacks two or more folded garments

ready to go
the stack is ready to bag or pack

fully configurable
number of garments per stack with
or without conveyor belt
